

Introducing TrialChecker
safeguarding subjects in clinical trials

TrialChecker - ensuring safety in clinical trials

TrialChecker allows authorised staff in Clinical Trial Centres (CTCs):

- to verify whether a volunteer or patient (also known as subjects) have previously been in a clinical trial

and

- to assess the impact of a subject's clinical trial history on the decision of whether or not to enrol the subject in a new clinical trial.

The purpose of TrialChecker is:

- To safeguard the safety of volunteers and patients (subjects) by avoiding inappropriate simultaneous participation in multiple trials or too frequent participation

and

- To safeguard investigators and/or clinical research organisations by providing another level of checking the eligibility of the volunteer or patient (subject) prior to trial participation

Clinical Trial Centres must be members of QCTN to use TrialChecker and their nominated staff members must be registered with QCTN for authorised and secure access to the service. QCTN's role is to administer TrialChecker. There is no fee to members for using the service.
